Work Experience

Media Manager

Lombard Church of the Nazarene - Lombard, IL

July 2021 to Present

I currently work with the audio and video setup at the Lombard Church of the Nazarene. I help with setting up, updating, programming, and troubleshooting audio equipment. This position also includes the management, setup, and maintenance of the computers used to present to multiple screens and streaming platforms. I have also configured a remote file sync system for users to be able to remotely adjust the presentation/streaming software (ProPresenter). My role has also consisted of creating a functional website for the church. I am still maintaining the information and formatting of the website through the church's domain.

Web Developer

Lombard Church of the Nazarene

January 2023 to March 2023

With this project, I created a general format for collaboration. Then, I collaborated with a few other people to design the entire website. I also was required to adjust the entire site so that it would scale properly. Finally, I had to configure the DNS of the church domain so that the old site would be replaced with the new one. This consisted of setting up a CNAME and reconfiguring email functionality as well. The website is live at www.lombardchurch.org
